ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B; are ALTERNATIVE PRODUCTS: 2 isoforms; A (shown here) and B; are produced by alternative initiation. A third isoform: C is produced by alternative splicing.

TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGH LEVELS IN TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGHLY EXPRESSED IN DEVELOPING BRAIN AND NEURAL TUBE. IN ADULT, HIGHLY EXPRESSED IN DEVELOPING BRAIN AND LEVELS FOUND IN TESTIS, HEART AND THYMUS.

BRAIN WITH VERY LOW LEVELS FOUND IN THE EMBRYO.

ISOFORM C IS EXPRESSED ONLY IN THE EMBRYO.

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           April 28, 2003, 18:14:43 ; Search time 13.9029 Seconds (without alignments) 808.430 Million cell updates/sec
